Hot on the heels of the Drawmer MC2.1, renowned for its functionality and transparency, comes its sibling, the MC1.1 - offering the same fantastic sound but with a feature set more suitable for a less complex post production booth or home use, and with the addition of a RIAA phono stage - the MC1.1 is a great solution for your precious turntable setup.

The front panel is dominated by the two large, independent volume controls for the main outputs and headphone amplifier, both with excellent channel matching and the smoothest possible action. There are also individual switches for each input source and output section making an elegantly simple yet functional user interface.

MULTIPLE SOURCE PRE-AMP & HEADPHONE AMPLIFIER

Independent Amplifiers for Headphones and Main Line Outputs, with Large Volume Knobs for Precise Control.

3 Input Sources - Balanced XLR, MP3 Player 3.5mm Jack & Switchable Line/Phono (RIAA MM) RCA.

Quad Interleaved Parallel Pots for Excellent Left/Right Channel Matching & Smooth Character.

Transparent Sound Quality via Ultra Low Noise Signal Path & Low Hum Internal Linear Power Supply.

Two switchable output stages - Balanced XLR and RCA with Mono Sub woofer output available simultaneous to balanced outputs.

Designed and manufactured by Drawmer in the UK.
